STEM CELL RECRUITMENT THERAPY

With over 20 Million Americans suffering from joint pain, and over a million each year undergoing joint replacements in the US via stem cell recruitment methods. Stem Cell Recruitment Therapy™ is safe and effective, helping the body boost its ability to heal itself. It is administered through a single injection of Human Amniotic Fluid, AF.

- **Powerful Treatment:** Recruits your body's stem cells to reconstruct and regenerate the injured tissue that is causing pain.
- **Convenient & Painless:** 15-minute in-office, single injection.
- **Quick Recovery:** Return to everyday, non-high-impact activities.
- **Safe, Drug-Free Injection:** Contains growth factors and other naturally occurring nutrients.

AMNIOTIC FLUID, AF INJECTIONS

Research has confirmed that AF contains a broad spectrum of growth factors and proteins that play important roles in wound healing, cell production, tissue protection, and repair. By using AF, arthritis and soft tissue injury patients have another option to repairing tissue damage without use of pain masking injections and or surgery.

BENEFITS OF AN AF INJECTION

- Contains naturally occurring anti-inflammatory agents, such as cytokines.
- Contains hyaluronic acid, which lubricates joints and tendons, easing the pain and helping restore mobility.
- Presents no threat of patient rejection.

A GREATER HEALING POWER

AF Injections are safe and effective, helping the body boost its ability to heal itself. This therapy is helpful in treating

- **Tendinitis and Tendinosis**
- **Plantar Fasciitis and Fasciosis**
- **Patellofemoral pain syndrome**
- **Epicondylitis**
- **Joint Inflammation and Bursitis**
- **Muscle Tear or Injury**

Ask your doctor if **Stem Cell Recruitment Therapy** can help you.
